

V-Rooms™ Launches Work-From-Home Solution for Swine Flu (H1N1) Season

V-Rooms(TM), a leading provider of internet based virtual data room technology typically used for confidential financial and legal transactions, announced a special discounted [business continuity](#) pricing structure for the upcoming flu season.

Atlanta, GA (Vocus) September 22, 2009 -- V-Rooms(TM), a leading provider of internet based virtual data room technology typically used for confidential financial and legal transactions, announced a special discounted business continuity pricing structure for the upcoming flu season. This will provide companies facing increased absenteeism due to the impact of the Swine Flu (H1N1) virus, with a ready-on-demand, economical and secure solution to allow their employees and others to [work from home](#) or anywhere remotely.

According to a Harvard School of Public Health study of more than 1,000 businesses, released earlier this month, many American businesses are unprepared to deal with widespread employee absenteeism in the event of an outbreak of swine flu not even approaching pandemic levels. The survey found that 80% of the businesses expect severe problems if half their workers are out for a month.

“Our program is essentially a workplace ‘insurance policy’ and can be set-up within a few hours. This approach provides an excellent platform for securely storing, retrieving, and collaborating on business documents -- a perfect solution for business continuity during a time of increased absenteeism.” said Dan Bradbary, CEO of Due Diligence Online, LLC, parent company of V-Rooms. “Rather than emailing documents back and forth, our solution provides high levels of security while enabling easy access to the information by any authorized party either inside or outside the company’s computer system firewall.”

From an IT perspective, our V-Rooms solution has features that enable companies to store documents in an organized way and access them over the Internet 24 hours a day, 7 days a week, using the same encryption technology employed in online banking. Personnel are able to continue to work together and collaborate on projects with reduced levels of face-to-face interaction. Access to individual documents, folders or libraries by work-from-home employees may then be controlled on a per-user basis. Additionally, management has granular reporting of file and employee activity which is essential for maintaining productivity in a telework or work-from-home scenario.

About V-Rooms™, powered by Due Diligence Online, LLC:

Due Diligence Online, LLC (800-731-6379) provides a full service Virtual Data Room solution, using its proprietary [V-Rooms™](#) technology for secure, auditable online document management of critical business information.
